## EDUCATION

|                                                           |               |
|-----------------------------------------------------------|---------------|
| <b>Bachelor of Electrical and Electronics Engineering</b> | 2020–2024     |
| VIT University, Vellore, India                            | CGPA: 8.37/10 |

## EXPERIENCE

|                                      |                         |
|--------------------------------------|-------------------------|
| <b>Ascendion Engineering Pvt Ltd</b> | <i>Bangalore, India</i> |
| <i>Senior Associate Engineer</i>     | Oct 2025 – Present      |
| <i>Associate Engineer</i>            | July 2024 – Oct 2025    |

- Built backend APIs and service-layer logic for the Workbench platform (Spring Boot) enabling configuration and execution of AI-driven code migration workflows used across internal teams.
- Integrated Camunda into the Workbench backend to orchestrate workflow execution and provide real-time process visualization, including BPMN process definitions, and REST-based workflow triggers.
- Developed multiple agents in the AAVA Agentic AI platform, including the Knowledgebase Extraction Agent, which parses application codebases to generate structured system documentation.
- Led iterative prompt engineering, LLM model evaluation (response accuracy, hallucination control), input-output formatting pipelines, and fault-handling mechanisms to improve agent reliability and output stability.
- Supported workflow automation pipelines that reduced repetitive code analysis and documentation effort, with internal usage feedback indicating 50 % in manual workload.

## PROJECTS

|                                                                                                                  |                            |
|------------------------------------------------------------------------------------------------------------------|----------------------------|
| <b>WaterWala – Water Service Marketplace Platform</b> <a href="#">Github</a>                                     | <b>June 2025 – Present</b> |
| <i>Technologies: Spring Boot, Spring Security, Spring Cloud, Feign Client, MySQL, MongoDB, Redis, JWT, JUnit</i> |                            |

- Architected modular microservices using Spring Boot across user management, payments, and order processing domains, reducing deployment time and enabling independent scaling.
- Implemented polyglot persistence using MySQL and MongoDB with Redis caching, optimizing data access patterns and improving API response performance by 45%.
- Facilitated seamless inter-service communication via Feign client for declarative RESTful API calls and implemented JWT-based authentication with granular role-based access control using Spring Security.
- Developed comprehensive unit and integration tests using JUnit to ensure code quality and reliability across microservices architecture.

### CypherQueryBuilder – AI-Powered Schema Migration Tool [Github](#)

*Technologies: Spring Boot, RESTful APIs, Javascript, HTML, CSS Neo4j, Agentic AI*

- Built a Spring Boot microservice to convert SQL schemas into Neo4j Cypher queries using AI-powered API integration with intelligent response parsing and validation.
- Integrated with Ascendion’s agentic platform via secure REST APIs with multi-layer authentication (Bearer tokens, API keys) and comprehensive SSL/TLS handling.
- Led a team of three developers to secure the winning position in Agentic Wars competition, demonstrating strong leadership and collaborative problem-solving skills in a fast-paced environment.

## TECHNICAL SKILLS

|                     |                                                                                |
|---------------------|--------------------------------------------------------------------------------|
| <b>Languages</b>    | Java, Python, SQL                                                              |
| <b>Technologies</b> | Spring Boot, Spring Security (JWT), REST APIs, JPA/Hibernate, MongoDB, MySQL   |
| <b>Tools</b>        | AWS (EC2, S3, Lambda, IAM), Git, JUnit, Postman                                |
| <b>Concepts</b>     | Microservices Architecture, Agentic AI Workflows, Data Structures & Algorithms |

## CERTIFICATIONS & ACHIEVEMENTS

- AWS Certified Solutions Architect Associate — Amazon [Certificate](#)
- Winner – Agentic Wars, Ascendion: Developed an AI-powered workflow to convert relational schemas into graph database code using Neo4j and Spring Boot; awarded Ascendion Certified Agentic Warrior.
